

The new Cloud Experience that is Transforming your Business

Accelerate Digital Transformation with HPE GreenLake Cloud Services and Interxion Colocation Services

Businesses and organisations are building new hybrid infrastructures to deliver IT services that require agility, resiliency, and security. As the popularity of public cloud services continue to grow business leaders are putting pressure on IT departments to move more to consumption-based model services. The move towards hybrid or multi-cloud strategies is also raising challenges around data centre facilities, with many legacy customer data centres not capable or flexible enough for their future IT needs.

For the majority of organisations their existing infrastructure and data centre capabilities restrict their ability to adapt and shift as the economic climate demands. To succeed in today's environment organisations need to modernise applications, infrastructure and adopt a hybrid cloud strategy. This is difficult to do when the Enterprise on-premise infrastructure is fixed and the costs and time delays associated with implementing the required data centre and connectivity changes, to truly harness the flexibility of a cloud strategy drain the organisation of much needed capital.

Get capacity when you need it

Using HPE GreenLake Cloud Services with Interxion Colocation Services you can:

- Pay only for the IT resources you use
- Reduce up-front cash outlays
- Direct, secure and high-speed access to public cloud
- Highly scalable to meet even the most demanding future needs
- Modernise with minimal risks
- Control your security and compliance
- Get the right mix of infrastructure for your workloads

”

You can deploy HPE GreenLake Cloud services in Interxion’s colocation centres to reach the global markets that expand with your business.

”

In order to avoid expensive capital expenditure and the complexity and risk of managing a data centre Enterprises are moving to colocation providers who offer connectivity services; direct private access to all public cloud providers; carrier neutral internet providers. Allowing Enterprises to focus on the implementation of hybrid cloud solutions without the challenge of security, control and operational burden of running an on-premise data centre. But this still leaves the question of how can an organisation address the inflexibility of their on-premise infrastructure?

The challenge for IT is to tap into the flexibility and convenience of the cloud, while still maintain security and control, and alleviate the operational burden on IT. In response to these challenges, Hewlett Packard Enterprise offers GreenLake Cloud Services on a consumption-based model, and the good news is that you don’t need to run a data centre to use GreenLake.

HPE Greenlake Cloud Services with Interxion Colocation Services

HPE GreenLake with Interxion co-location combines the benefits of a public cloud-like experience with the next generation network connectivity of 700+ carriers. This hybrid- and multi-cloud architecture empowers customers keep full control of their IT while it prevents cloud vendor lock-in. It also frees customers from the burden of capital expenditures and the responsibility of maintaining and upgrading legacy data centres and infrastructures on their own premises. This provides a foundation for a phased exit from costly legacy customer data centres into a secure, scalable, sustainable, off-premise Greenlake hybrid cloud environment.

HPE GreenLake Cloud Services is HPE’s market-leading IT as-a-Service offering that brings the cloud experience to apps and data everywhere—data centres, multi-clouds, and edges—with one unified operating model. HPE GreenLake delivers public cloud services and infrastructure for workloads via Interxion’s Colocation Services, fully managed in a pay per use model.

Interxion, a digital realty company – a global provider of colocation and connectivity services enables Enterprises to Interconnect with Connectivity Providers, Public Clouds and each other.

Improve speed and agility by increasing your connectivity to public clouds while staying in control of costs, security and compliance

To help you gain control of your security, costs and compliance without investing in your own data centre, you can deploy HPE GreenLake Cloud services in Interxion's colocation centres to reach the global markets that expand with your business. Interxion will help you safeguard mission-critical data taking into account your security needs, operational reliability, cost and compliance without consuming capital and taking on the operational overhead associated with your own data centre.

Benefit from Cloud Economics

- Eliminate the cost of managing your on-premise data centre
- No up-front outlay for consumptions-based services
- Reduce egress costs with direct access to public cloud

Transform IT Service Delivery

- Accelerate how you deliver services across the business
- Easily add services through a single portal and gain deeper insights for action

Transform Data for Insights

- Create data services and ML/AI capabilities, while meeting data gravity, sovereignty, and compliance needs

Deliver enhanced Connectivity & Security

- Direct access to public cloud providers
- Remove complexity of moving between network connectivity providers

The Power of One

- One contract to negotiate and manage
- One invoice to reconcile and manage
- One point of contact to manage support needs and capacity growth planning

Sustainability

- Reduce your carbon footprint with our sustainability strategy
- Powered by 100% renewable energy
- Densely colocated facilities that manage complex IT equipment has lower PUE (Power Usage Effectiveness)

About Interxion

Interxion: A Digital Realty Company, is a leading provider of carrier- and cloud-neutral data centre services across EMEA. With more than 700 connectivity providers in over 100 data centres across 12 European countries, Interxion has created connected communities of connectivity, cloud and content hubs. As part of Digital Realty, customers now have access to 44 metros across six continents.
