

SOLVINITY BUILDS SECURE, FLEXIBLE FOUNDATION TO HELP CUSTOMERS MAINTAIN IT CONTROL AT SCALE

Solvinity
Secure Managed IT Services

Challenges:

- Safeguard sensitive data without sacrificing speed and productivity
- Maintain strictly controlled IT environment while offering enough flexibility to move workloads between private and public cloud
- Comply with rigid regulations, differing between international markets

Solutions:

- Housed IT foundation in densely connected, global data centre that can cater to varying cybersecurity legislation across the globe
- Offer a hybrid multi-cloud solution with Cloud Connect that provides the control and flexibility customers need to succeed

Benefits:

- Connect to variety of cloud providers through a single private port
- Easily move workloads between private and public clouds and physical racks on-premises or collocated without downtime
- Ability to scale globally while maintaining compliance and cost

Managed IT services provider Solvinity strives to provide highly secure and reliable IT environments for a variety of customers – from governments to financial and business services – handling highly sensitive data. Whether they're leveraging cloud solutions, managed hosting and workspace solutions or developing their own software, Solvinity's customers need a flexible IT environment that can meet their unique needs without compromising cybersecurity or speed. In Interxion, Solvinity saw a partner who could package together everything they needed to build a foundation for their customers: flexibility, connectivity and stability.

A Secure Foundation for Customers

Digitalisation has become close to non-negotiable. But, for organisations processing highly sensitive data, the prospect of leveraging public clouds can be anxiety-inducing, even if it means opportunities for scale, speed and cost savings. Mitigating the risks that accompany vital innovation is paramount for these organisations to comply with legislation, while still being able to connect across regions via low-latency, reliable connections.

To ensure their sensitive data is under tight control, customers rely on Solvinity to monitor data and systems 24/7 and comply with cybersecurity regulations while also providing a flexible environment that can be tailored to save costs. That's why Solvinity, based in the Netherlands, initially colocated their IT at Interxion's Amsterdam campus more than a decade ago. In doing so, Solvinity gained access to a safe, secure space directly connecting a variety of cloud and connectivity providers. Interxion's international footprint ensured Solvinity would be able to meet customers' strict security requirements wherever they're based while providing equal access to IT resources.

Reliable, Fast, Private Connection

Due to the sensitivity of their data, many of Solvinity's customers cannot make the full jump to the cloud. Nevertheless these customers still need to leverage the cloud to power innovation and scale their business globally.

About Solvinity

Solvinity provides Secure Managed IT Services in the public, private and hybrid cloud for organisations with high security requirements. Solvinity's services include innovative cloud solutions, outsourcing, managed hosting and workplace solutions. For organisations that develop their own software, Solvinity offers solutions such as Integrated Delivery and 'Stretched' DevOps. The organisation has distinguished itself with high standards for cybersecurity and certifications according to national and international standards such as ISO 27001, ISO 14001, ISO 9001, SOC 1, SOC 2 and NEN 7510. Solvinity provides services to, among others, the government, including the Ministry of Justice and Security, municipalities and leading organisations in financial and business services, such as Trans Link Systems (public transport chip card), TNO and ONVZ. Solvinity has over 250 employees and four offices in Amsterdam, Assen, Amersfoort and Den Bosch. For more information, please visit www.solvinity.com.

About Interxion: A Digital Realty Company

Interxion: A Digital Realty Company, is a leading provider of carrier- and cloud-neutral data centre services across EMEA. With more than 700 connectivity providers in over 100 data centres across 13 European countries, Interxion provides communities of connectivity, cloud and content hubs. As part of Digital Realty, customers now have access to 49 metros across six continents. For more information, please visit www.interxion.com

Solvinity needed to incorporate the cloud with the rest of their IT foundation and ensure that customers would benefit from guaranteed uptime when moving workloads while maintaining strict control over their environment.

Interxion's Cloud Connect fostered a single high-performance connection between Solvinity's private cloud and a variety of public clouds. As a result Solvinity can enable its customers to take advantage of a multicloud solution and facilitate CI/CD. Customer developing new or updated software can release new functionalities smoothly and securely and move workloads around while ensuring their IT environment is optimised at all times.

"Continuous updating and releasing requires good connectivity, a reliable connection and flexibility. That makes choosing the right data centre an important prerequisite," said Bas Demmink, CTO at Solvinity. "One of Interxion's primary benefits is that everything is closely connected and operates together so there is almost no latency. This optimal connectivity is crucially important to our clients."

Partnering to Profit

With the ability to connect directly to multiple public clouds through a single, high-performance connection, Solvinity's customers not only benefit from increased security but also high reliability with an SLA of 99.999% — which optimises costs. Access to the cloud also saves on storage, the cost per GB an average ten times lower compared to the public internet.

At the same time, colocation provides the flexibility Solvinity's customers demand from managed IT service, while remaining mindful of compliance legislation across countries. Aside from the ability to easily move workloads, customers can select from Interxion's 700 connectivity providers all through one private, secure connection. This variety allows customers to reduce connectivity costs while reaching far and wide through low-latency routes.

"We work with partners who are leaders in their fields, such as Interxion and its high-end connected data centres," Demmink said. "Along with our customers, the scale allows us to profit, and continue to grow. In the end, we share a goal of helping organisations gain and maintain control over their IT operations by delivering a reliable, secure and compliant IT environment. In each other, we've found the perfect partner to help companies achieve this."

"Interxion and Solvinity share a goal of helping organisations gain and maintain control over their IT operations by delivering a reliable, secure and compliant IT environment. In each other, we've found the perfect partner to help companies achieve this."
