

CLOUD CONNECT

ACCESS YOUR CLOUDS

With the emerging trend of hybrid IT, organisations will need to manage IT stacks comprising on premise and cloud applications, in-house and outsourced IT.

Even in a wholly cloud-enabled future, enterprises and service providers will want to connect to multiple clouds – but many want to avoid the Internet, with its potential latency, throughput and security issues. Increasingly, cloud providers are addressing the access issue with private connect solutions. Future-proof your network with Cloud Connect to ensure predictable performance to all your cloud service providers.

Connect directly to the cloud

With Interxion's Cloud Connect platform, one physical connection in an Interxion cloud and carrier-neutral data centre enables you to connect directly to your cloud providers through virtual LAN connections which can be easily managed through the Interxion Customer Portal. It's a highly scalable, fast and cost-effective way to create hybrid and multi-cloud IT environments and to move business-critical workloads and latency-sensitive applications to the public cloud.

About Cloud Connect

- It's Secure – Avoid the public Internet and connect securely within your data centre to all of your CSPs
- It's Reliable – Ensure optimum performance with SLA backed connectivity and uptime
- It's Cost-Effective – Reduce costs with a single connection
- It's Easy – Manage orders through the Interxion Customer Portal
- It's Flexible – Change or manage providers efficiently with monthly contracts

About Interxion

Interxion (NYSE: INXN) is a leading provider of carrier and cloud-neutral colocation data centre services in Europe, serving a wide range of customers through over 40 data centres in 11 European countries. Interxion's uniformly designed, energy efficient data centres offer customers extensive security and uptime for their mission-critical applications. With over 600 connectivity providers, 21 European Internet exchanges, and most leading cloud and digital media platforms across its footprint, Interxion has created connectivity, cloud, content and finance hubs that foster growing customer communities of interest.

Benefits to enterprises

Ideal Environment for your Hybrid Solutions

Interxion partners with a range of cloud providers, meaning you can choose from a variety of providers for your cloud applications.

Ease of Doing Business

With Cloud Connect, there is no need for multiple contracts to individual, separately managed private connections to your CSPs. We offer flexible contracts. Further, online ordering via the Interxion Customer Portal, and our SLA backed 3 day Cross Connect provisioning, means you can deploy cloud applications quickly.

Improve Network Performance

Because the Internet is a best-effort delivery system, it can sometimes deliver inconsistent performance. With Cloud Connect, you have a dedicated connection which provides a faster and more consistent network experience. You can even run mission critical applications in the cloud without worrying about latency or downtime.

Reduce Bandwidth Costs

If you're an Interxion customer or are colocated in an Interxion facility via your hosting provider, you don't have to buy multiple private network connections. This means you save on connectivity costs.

Benefits to service providers

Enable Access to a Range of CSPs

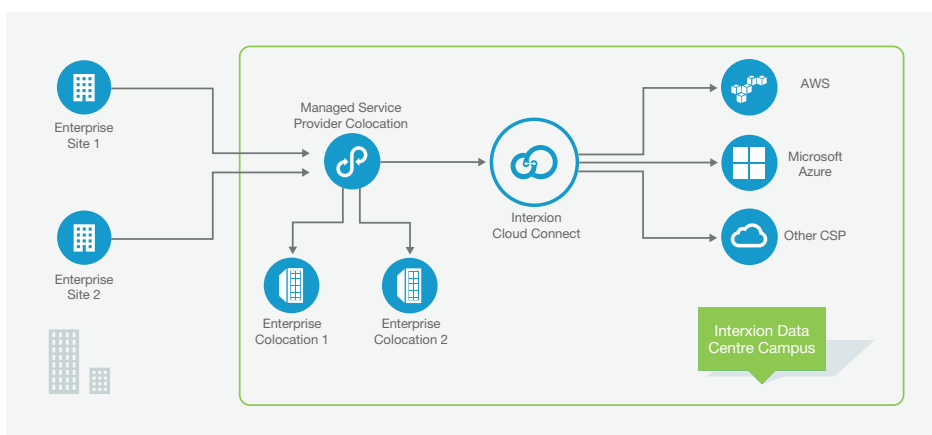

IT service providers can aggregate access to multiple cloud service providers as part of the delivery of complex hybrid IT solutions, and get the added benefit of direct access to the enterprises that colocate in Interxion data centres: a ready market of potential customers.

Grow your Business

As a completely neutral and non-competing provider, we encourage interconnection among our Communities of Interest and we work with many enterprises which are potential customers for your business.

Leverage our Community

We have direct access to more than 600 connectivity providers and most leading cloud providers. Being just a Cross Connect away from these providers means you can find the ideal business partners cost effectively.
