interxion™

CABINETS FULL AND HALF

Industry-grade, secure, cold aisle containment as standard

Cabinets for secure and reliable operation of your IT equipment

When you choose an Interxion data centre to house your equipment, you can rely on our highly secure facilities with exceptional levels of power availability, reliable connection than Internet-based connectivity.

Power resilience, exceptional connectivity, and security underpin all of our colocation products for the benefit of enterprises, cloud and service providers of all sizes. We offer a range of equipment housing options from individual Cabinets, to Cages and Private Rooms which provide extra layers of security.

Our products are standardised across all of our data centre campuses, so whether you locate in one facility or have an international deployment you can rely on the same functions, security and service levels across our European footprint.

Our Full and Half Cabinets have enclosed sides with locking front and rear doors for physical security. All Cabinets are delivered with full blanking panels, and are installed in cold aisle containment configurations with optimised airflow management which maximise energy efficiency and support high power density.

Each first Cabinet ordered comes with a pre-wired patch panel with your choice of transport media to the data centre Meet Me Room (MMR). In this way, you establish a presence in the MMR in preparation for quick and efficient installation of Cross Connects to your customers, partners, and suppliers when required. Our environmental controls and SLAs conform to ASHRAE 2011 guidelines for computing efficiency, performance, equipment availability, energy efficiency and PUE optimisation.

Interxion cabinets

- **Security.** Layered physical access control, locking Cabinets with fully enclosed sides, Cages that extend slab-to-slab, metal mesh or metal panel wall options.

- **Energy efficiency.** Cold aisle containment, full blanking panels, sealed floor openings for optimised airflow management and PUE control.

- **Robust service levels.** Environmental guarantees according to ASHRAE 2011 inlet temperature and humidity specifications.

- **Feature rich.** Pan-European availability, broad selection of power options, support from our Hands & Eyes service.

We're there when you need us

Whether you need assistance with power or racking configurations or support for your kit in operation, we're there. Our services include strong SLAs, 24x7 support through our European Customer Service Centre (ECSC), on-site Hands & Eyes services, and self-service support and administration through our Customer Portal.

About Interxion

Interxion (NYSE: INXN) is a leading provider of carrier and cloud-neutral colocation data centre services in Europe, serving a wide range of customers through over 45 data centres in 11 European countries. Interxion's uniformly designed, energy efficient data centres offer customers extensive security and uptime for their mission-critical applications. With over 700 connectivity providers, 21 European Internet exchanges, and most leading cloud and digital media platforms across its footprint, Interxion has created connectivity, cloud, content and finance hubs that foster growing customer communities of interest. The Interxion cabinet product line

Our award winning colocation infrastructure provides the foundation for enterprise companies and service providers. Our data centres have attracted a diverse customer base, creating communities of interest. These bring together companies operating in the same sector so that they can benefit from fast and low-cost interconnectivity and establish valuable business relationships.

Interxion's Cabinet options enable our customers to conveniently and securely operate and maintain their IT equipment and interconnections in our data centres.

- **Agility**. First Cabinet comes with pre-cabled patch panel to the Meet Me Room.
- **Security**. Layered physical security and strict access control policies, locking metal mesh doors at front and rear, with fully enclosed side panels.
- **Compliance**. Physical security features for those organisations subject to regulatory compliance.
- **Reliability**. ASHRAE 2011 environmental controls, segregated data and power cable routing for EMI mitigation.
- **Energy efficiency**. Standard cold aisle containment configuration, blanking panels and sealed floor openings for optimised airflow management.
- **Customer experience**. Standardised Products across all Interxion data centres, saving time and increasing efficiency

Cross Connects

When you colocate in an Interxion carrier and cloud-neutral data centre you can minimise networking costs, significantly reduce latency and improve application performance by using Interxion's portfolio of Cross Connects.

These directly connect you to Europe's widest choice of national and international connectivity providers and to any other Interxion customer colocated in the same data centre, campus or city.

All our interconnectivity runs through a centralised Meet-Me Room in each data centre, enabling our customer communities to do business with minimal latency. The Meet-Me Rooms are secure and private, with rigorously ordered cable management and supported by attentive maintenance.
